

## Colour-coded GPIO Header for Pi Zero /COM1111

Colour-coded GPIO pins that make locating that ground or power connection you need super simple!

These 40-pin 2x20 male headers from our friends at The Pi Hut can be used on a Raspberry Pi Zero and are colour-coded for your prototyping convenience.

You'll never have to search for a ground pin again!

The colour coding is nice and simple:

- Red = 5V
- Yellow = 3V3
- Black = GND
- Blue = DNC (Reversed I2C)

For hard-mode try installing the header the wrong way round and throwing away your normal pin reference! ;-)

**\* Raspberry Pi Zero NOT included**
