

GD-25 - Gauge, Dynamometer 50-250 GR - Data Sheet

Jonard Small Force Gauges (also referred to as Dynamometer Gauges or Tension Gauges) are all ergonomically designed and have become the industry standard for measuring force. Measurement is extremely simple. Just place point of gauge arm perpendicular to the force to be measured. Reading can be taken in both directions - clockwise and counter-clockwise. Gauges offer extreme precision and durability. The measuring springs are made of hard tempered annealed beryllium copper. All gauges equipped with maximum reading pointer. This gauge has a flat tip and the dial diameter is 1 ½ inches.

Specifications

Lever Tip Style	Flat
Accuracy	±10 grams
Graduation	10.00 Grams
Range	50-250 Grams
Max Capacity	250 Grams
Weight	0.345 lbs
UPC No.	811490010055
